

YOU HAVE A DATE WITH THE SCIENCE UNDER CONSTRUCTION

Observations relative to our Science Museum (surely applicable to others)

Before being 3 laws, Newton was a man... **but** we mainly talk about the laws

Science is in constant evolution... **but** we mainly talk about past theories

Researcher is still a job... **but** we mainly talk about dead white men

Impact on the public (sad but maybe true)

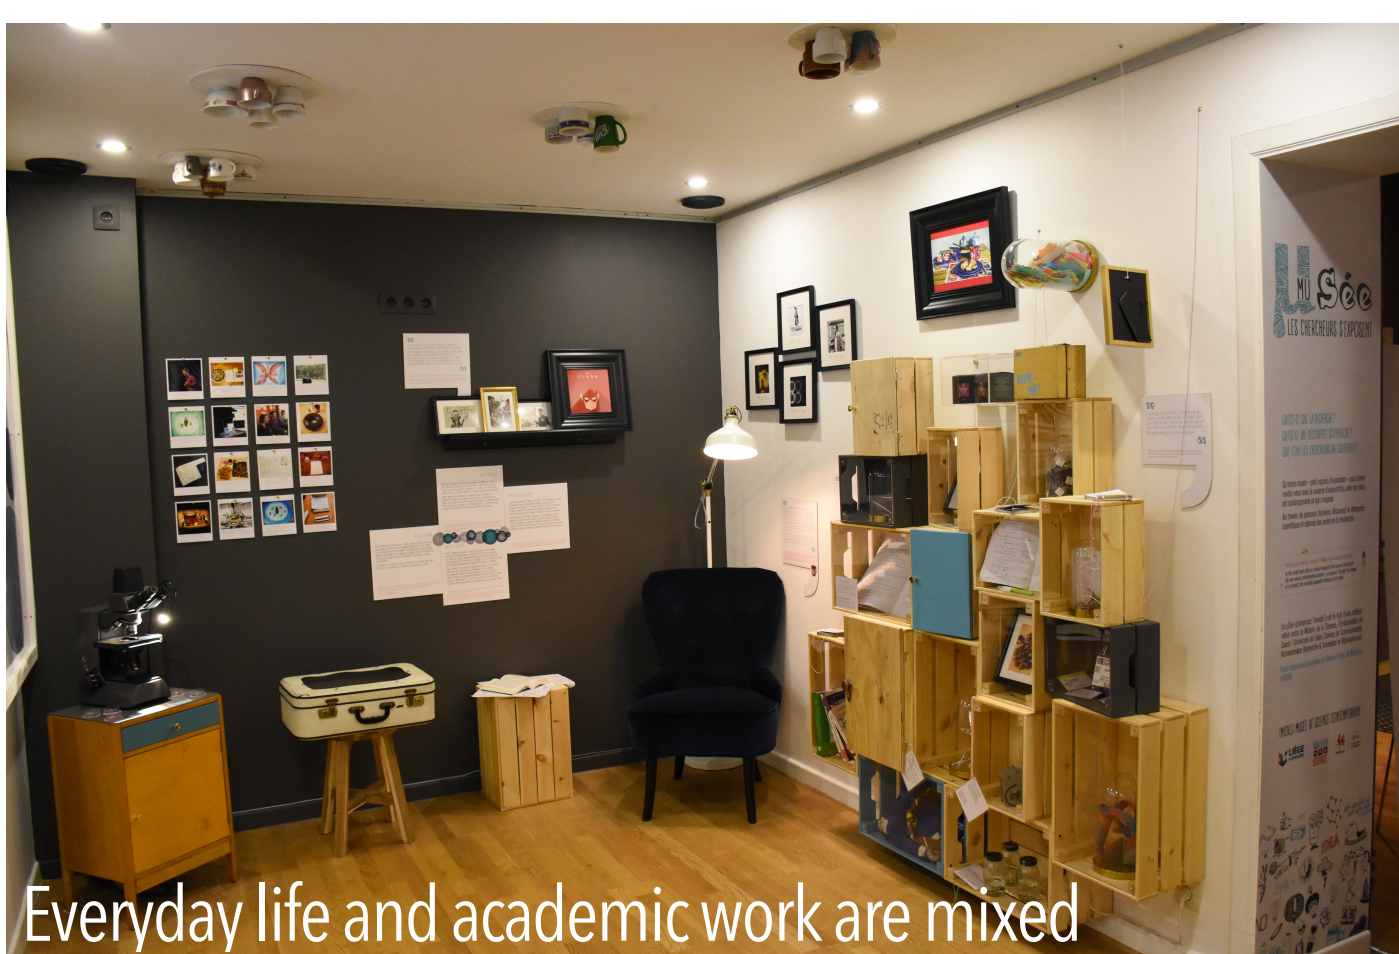

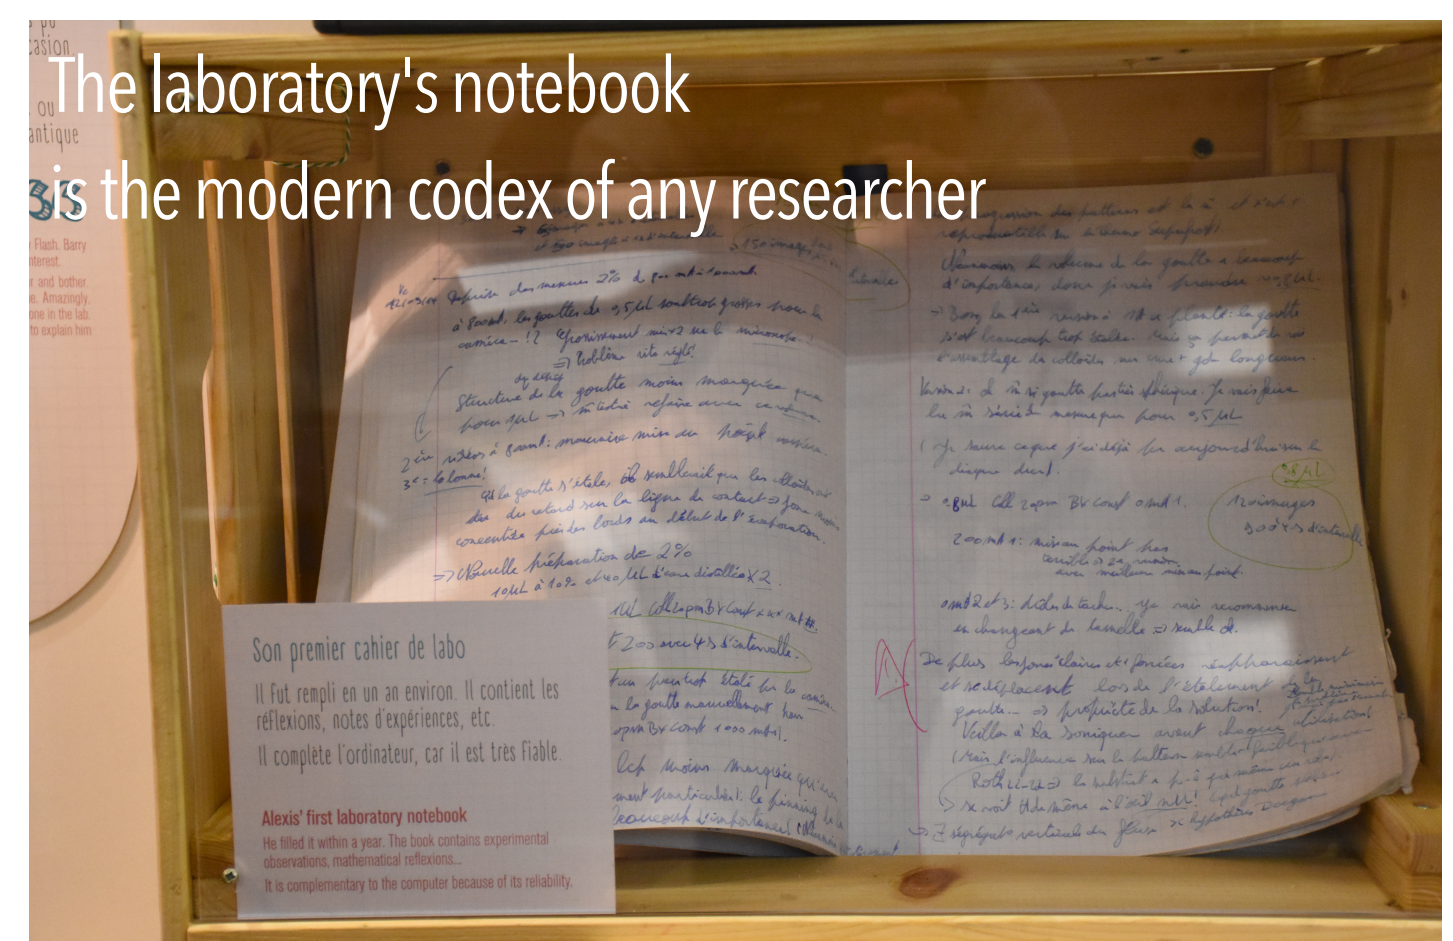

Knowledge appears to be more important than scientific method

Science is seen as a dogma

The real life of researchers is never explained

It is rather difficult to identify oneself to a dead person

We developed a room that welcomes the visitors to the backstage of the current scientific research

The **micro-museum** is a small room organised as a contemporary science museum. It tends to explain scientific research by joining a researcher in her/his everyday life, from the evening reading to the publication of scientific results.
